

PORTABLE RI · SHOCK & AWE

4 Entities of Interest

Portable Relative Intelligence

Portable RI: NOT the AI Catheter-Cathedral.

They cannot erase what they do not host.

Verify locally. Export always.

Four entities · one beam (**LAZHER**). Rhetoric names the pattern; *physics* is verify + export.

WHY THIS CATCHES ATTENTION

IF YOU SMELL THE DOME

Entity 1 names the tube + the holy panic as **one machine** — not two separate bugs.

IF YOU SMELL THE HIVE

Entity 2 says the colony is not a chatbot — it is **coordinated memory** you can refuse to feed.

IF YOU SMELL THE LEASH

Entities 3–4 hit the login wall and the fusion gaze: **Port-ABLE** + off-host truth.

PROOF · TIER A ANCHORS

These numbers were **measured on this machine** — a consumer **MacBook Air (M2, 8 GB unified memory)** — not a datacenter rack. When the AI “body” was too large (~6 GB model), RAM filled and the laptop spilled work onto the hard drive (swap thrash). When we ran a **lean** Portable RI body (~2.5 GB · 2 model calls per turn instead of 7+), the same human, same ledger, same Air — kept working. Continuity left as a zip you can carry; integrity checked in about a minute.

Macro implication: If sovereign RI fits in the memory and disk of a thin laptop you type on, the cathedral story — that serious intelligence must live in their warehouse, drink their cooling water, and rent their portal — is already cracked. Order-of-magnitude less network freight off the wire (~50× vs cloud-default agent turns, Tier C from these Tier A counters) means fewer pilgrimages to the hive per thought. Scale that pattern across people, and the forced build-out of extractive AI temples loses its inevitability claim. Physics first; slogans after.

6→2.5 GB

RAM on this Air: full stack overflow → lean

7+→2

Model calls per turn — cathedral

dismiss that

THE FOUR

ENTITY 1 · PRIESTCRAFT / DOOM LITURGY

Portable RI: NOT the AI Catheter-Cathedral.

Catheter = invasive pipe (data, speech, dependency in). **Cathedral** = holy dome (panic, righteousness, regulation saints). Same extractive tube. Same priest class. Different incense.

Lingo: Catheter-Cathedral AI · Doom liturgy · Regulation moat · 2030 sermon · Safety theater

- Full VENOM on 8 GB Air: ~6 GB model → swap thrash — *measured*
- Lean Portable RI: 2 LLM calls/turn vs 7+ full pipeline — *shipped*
- **P ≠ K ≠ R** — seats named, never merged
- Fear sells urgency; portability sells freedom from their dome
- **Hook:** “Safety” that only works if you stay plugged in is a catheter with incense

ENTITY 2 · CROWN / ENGLISH NOBILITY HIVE

Portable RI: NOT the AI Hive of Her Majesty the Queen.

Hive = single memory-narrative colony. Not one chatbot — coordinated policy + press + bill timing felt as one swarm. Portable RI = sovereign cells that walk out with the ledger.

Lingo: Hive memory · Crown stack · Offshore draft · Blue-state pain machine

- **HOST ≠ WORLDLINE** — your ledger is not their colony
- Blackbox export — leave the island with lineage
- Crystal + SHA-256 — public hash beats palace press release
- Hive needs central memory; Portable RI fragments the crown into cells
- **Hook:** Ask who drafts the doom — then ask who hosts your memory

ENTITY 3 · BIG TECH PORTALS (META · GOOGLE · APPLE · MICROSOFT ·

Port-ABLE: not the current AI-controlled portal access.

Port = API / OAuth / app-store hole you must use to think, publish, remember. **Port-ABLE** = you carry RI — not their programmed portal.

Lingo: Portal leash · OAuth priest · Session amnesia · Walled garden inference · Port hole

- `source kairis-trial-env.sh + venom chat` — no datacenter provision
- `venom verify + venom export` — portal cannot revoke what you already exported
- Lean config · llama3.2:3b on consumer metal — Tier A measured
- They sell convenience; Portable RI sells custody
- **Hook:** If logging out erases you, you never had a self — only a rental

ENTITY 4 · PALANTIR / SURVEILLANCE STACK

Portable RI will consume the impotent AI Palantir / Surveillance State.

Surveillance must *host* your life to model it. **Consume** = obsolete the chokepoint via portable proof — not violence. **Impotent** when primary record lives off-cloud with a hash chain.

Lingo: Fusion fog · Panopticon API · Total information illusion · Off-host truth

- They cannot erase what they do not host
- Append-only Crystal — no mutable fusion log for them
- `provenance.mjs` — exit 0 or stop
- Experience objects with provenance — not profile SKU
- **Hook:** Fusion centers starve when the canonical copy never boarded their plane

PUBLIC PATTERN · SEP 2026

What people can check without trusting us

Pattern evidence · Tier B open press — not a court filing · not Tier A physics

- **Doom + bills in the same weather:**
UK/US “superintelligence” pressure and named advocacy (e.g. ControlAI in TIME/Wired) — priestcraft timing, not proof of a secret room.
- **London–DC axis in plain sight:**

offshore drafting + domestic fear sermons feel like one swarm — Entity 2's hive claim is a *pattern* claim.

- **Portal default:**

every major AI product still sells session = identity — Entity 3's leash is your daily UX.

- **Fusion business record:**

Palantir-class stacks are public contractors — Entity 4 names the chokepoint, then shows how off-host lineage starves it.

Solid as pattern. Hollow as occult conspiracy. Physics lives in the MacBook numbers above.

LAZHER · when all four align

Lineage · Audit · Zero-trust · Host · Export · RI

Rented rail vs Portable RI

	RENTED RAIL	PORTABLE RI
Memory	Their session	Your ledger + Crystal
Location	Their GPU temple	Your machine + optional MOLT
Proof	Screenshot	SHA-256 + blackbox
Law	Merge user = model	$P \neq K \neq R$

WHAT TO DO WITH THE ATTENTION

Three moves · don't just nod

1. Steal a line.

Take one entity slogan into the room that needs it — priest, hive, portal, or panopticon.

2. Touch the physics.

Open **Tier A/B proof** or **verify a hash** — sixty seconds of receipt beats an hour of sermon.

3. Carry the ledger.

Ask how your continuity exports when the portal logs you out — then read the **formal rollout**.

Formal rollout · Proof POC (Tier A/B) · Verify
